

Stainless steel strapping machines
Semi-(fully) automatic strapping in
humid conditions

M-Pac YM

The semi-automatic M-Pac YM model is very well protected from moisture. The stainless-steel body and corrosion protected parts make this model suitable for damp conditions. With adjustable table height, easy operation and user-friendly features.

The fully automatic model CI 89 M is a reliable stainless steel strapping machine. This model is very simple and can be integrated (option) in an automated packing line. With high speed and high reliability, the CI 89 M is suitable for use in multiple sectors. The table height is adjustable.

CI 89 M

CI 89 YM

The automatic model CI 89 YM is a reliable stainless steel strapping machine. This model is very simple and can be integrated (optional, see model below) in an automated packing line. With high speed and high reliability, the CI 89 YM is suitable for use in multiple sectors. Additionally, the table is height adjustable in 3 positions.

The fully automatic model CI 89 YM Fully automatic is simple to build into an automated packing line. This model has very high reliability and stability and with standard components, an economically attractive solution. The pusher, contact pressure separator bar and package are easy to fit. The CI 89 YM Fully automated unit is suitable for deployment in multiple sectors.

CI 89 YM Fully automatic
